

IT Security Caging

EFS offers a choice of IT security cage solutions, from simple wire mesh security cages to our vented steel panel security cages. IT security cages are an ideal solution for restricting access to certain areas within a data centre or computer room and protect high value IT assets. EFS provide a full design and installation service to prevent any disruption to live environments. A site survey is carried out from which detailed plans are drawn so that the final installation can be visualised.

- Solid steel bolted construction, all bolts are security bolts
- A modular construction to allow for easy assembly on site, capable of future expansion
- Available in vented or solid steel panels
- A range of door types from hinged to sliding
- Support best practice with airflow management
- Electronic locks matched to the local building access control and security systems
- Integration with the existing hot/cold aisle containment
- Underfloor caging
